ABOUT ME

Product-minded Full-Stack engineer with a front-end focus, specialized in end-to-end TypeScript across React, Next.js and NestJS, with 3+ years building web products and SaaS for fintech, insurance and corporate clients. I set design systems and technical standards that outlive my involvement, and build the backend behind them: REST APIs, async queues and serverless pipelines on AWS.

EXPERIENCE

Front-End Developer

Argentina

IT ROCK

Mar 2025 – Present

- Defined the Design System and technical standards (Tailwind CSS, Zod, shadcn/ui) that became the company standard across 5 Next.js projects, 2 of them outside my own involvement.
- Took part in the internal R&D lab, automating agent-driven test case generation for projects carrying technical debt.
- Delivered features with Claude Code under a Spec-Driven Development workflow integrated with Jira.
- Built document management, subscription and online booking features for financial and corporate platforms, with Azure AD (MSAL) authentication and Stripe/PayPal payments.
- Built serverless pipelines on AWS Lambda with SQS queues for media processing (Python + FFmpeg) and document generation.

Full-Stack Developer

Argentina

AndesIA

Jan – Jun 2025

- Designed and built the entire frontend of LICAUT, a SaaS platform automating windshield replacement tenders for insurance companies, and implemented from scratch the async queue system (BullMQ + Redis) orchestrating tender scraping and document submission. Processing time per tender fell from 5–8 minutes to 30–40 seconds, roughly 90% faster.
- The product was commercialized to Todo Parabrisas, a client for whom I also built the corporate landing page. It runs in production, processing 200–300 tenders a month with peaks of up to 500.

Front-End Developer

Argentina

LILAB

Dec 2023 – Jun 2024

- Brought back to build Temba, the digital brand of Progreso, as a full standalone application: the complete invoice factoring product end to end, instead of a flow embedded in someone else's portal.
- Owned the UX/UI design of the product alongside its front-end implementation.

Front-End Developer

Argentina

LILAB

Nov 2021 – Mar 2023

- Led end-to-end development of the invoice factoring flow for Progreso, a CMF-regulated Chilean non-bank lender, integrated into its existing customer portal.
- Turned onboarding from manual to self-service, integrating automated scoring and invoice imports from the SII (Chilean tax authority).
- Moved the handoff of operations between executives from manual phone tracking to a database-backed state machine.
- Built the team's first design system and Figma workflow, based on TypeScript, Atomic Design and SOLID.

SKILLS

Front-End: TypeScript, JavaScript, React, Next.js, Astro, Tailwind CSS, Zod
Back-End & infrastructure: Node.js, NestJS, Python, PostgreSQL, Prisma, Redis, BullMQ, AWS (Lambda, SQS)
English: B2 general, C2 reading and listening

PROJECTS

- Mindtú

2026

Web platform for an audiovisual production company and creator academy: corporate site plus academy section with separate funnels for two audiences. Built end-to-end with Next.js 16 and React 19.
- AYEMAG

2025

Commercial landing page and validated lead-generation flow for an industrial flexible container manufacturer, built with Astro and React.

EDUCATION

- Henry, Argentina

2021

Full-Stack Web Development
